Introduction

The Climate Risk and Early Warning Systems (CREWS) Initiative was officially launched at the 21st session of the UN Framework Convention on Climate Change (UNFCCC) Conference of the Parties (COP21) in Paris, France as part of the Solutions Agenda. It aims to strengthen and increase the capacity for Multi-Hazards Early Warning Systems, to generate and communicate effective impact-based early warnings and risk information for hazardous hydro-meteorological and climate events to protect lives, livelihoods, and property in Least Developed Countries (LDCs) and Small Islands Developing States (SIDS).

3. Asset Mix and Investment Income

ASSET MIX

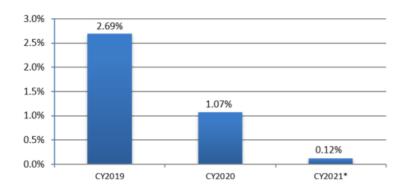

Funds held in trust by the World Bank (as the Trustee) are maintained in a commingled investment portfolio (the "Pool") for all trust funds administered by the World Bank. Within this pool, the CREWS funds are invested in a short-term, high quality fixed income portfolio with an investment horizon of up to one year. On July 1, 2015, the World Bank formally adopted the Conditional Value-at-Risk (CVaR) measure as the risk constraint in the management of trust funds. Funds are managed such that the expected maximum loss, as measured by the CVaR, at the portfolio's investment horizon, is not to exceed 1% with 99% confidence.

The portfolio allocation by asset class has the largest allocations to government securities and money market instruments.

INVESTMENT RETURNS

The CREWS funds are invested in accordance with the investment strategy established for all trust funds administered by the World Bank and has earned approximately USD 1.39 million² since inception. The portfolio return during the first two quarters of calendar year 2021 was 0.12%, non-annualized.

*non-annualized
